

## SEO · CONTENT

# GSC anomaly bot

Daily pull from Search Console, Claude flags pages that lost clicks or impressions, Slack ping names the URL, the keyword, the % drop, and a likely cause.

## THE PROBLEM

# Your traffic drops on Tuesday. You notice on Friday.

Search Console buries the signal in dashboards nobody opens. By the time you spot a page that lost 40% of its clicks, it has been bleeding for a week. Most drops are fixable in an hour — a Yoast meta wipe, a canonical break, a broken internal link, a stray noindex. The hard part is catching them on day one, not day eight.

DROPS FIXABLE IN 1H

## Built for

- SEO leads owning 10-200 indexed pages on one site
- Agencies tracking 3-15 client GSC properties
- Founders running content-led SaaS with organic as a top channel

## The flow

## BUILD IT

# Stack & setup

## Tech stack

| LAYER         | TOOL                      | COST/MO       |
|---------------|---------------------------|---------------|
| Orchestration | n8n (self-host / cloud)   | \$6-20        |
| Data source   | Google Search Console API | \$0           |
| LLM diagnose  | Claude Sonnet 4.6         | \$3-10        |
| Alerts + log  | Slack + Google Sheets     | \$0           |
| <b>Total</b>  | —                         | <b>\$9-30</b> |

## Before you import

- n8n instance (self-host DO \$6/mo OR n8n.cloud trial)
- GSC property verified + Google service account JSON with Search Console read scope
- Anthropic API key with \$20+ credit
- Slack channel #seo-alerts + bot token
- Google Sheet with columns: checked\_at, page, query, clicks\_now, clicks\_prior, pct\_change, likely\_cause, fix\_suggestion

## Setup (45-90 min fresh (GCP service account is the slow part))

1. Spin up n8n: `docker run -d -p 5678:5678 n8nio/n8n` or `n8n.cloud`
2. GCP console → enable Search Console API → create service account → download JSON key
3. Add the service account email as a Restricted user inside your GSC property
4. n8n credentials: add Google Service Account, Anthropic API, Slack OAuth, Google Sheets OAuth
5. Workflows → Import from Clipboard → paste JSON from page 4
6. Replace `REPLACE_ME_GSC_SITE_URL` + `REPLACE_ME_SHEET_ID` + tweak the 25% threshold if needed
7. Execute once manually → confirm Slack ping fires only on real drops → activate

**Skill level:** Intermediate. Google service account setup is fiddly the first time.

COPY + PASTE

# n8n workflow JSON

Copy from GitHub →

One click. Opens raw file with native copy button.

SCAN ON  
MOBILE

Or import the file 09-gsc-anomaly-bot.json from the pack folder. In n8n: **Workflows** → **Import from Clipboard / File**.
