Async Standup Bot

9:30am every weekday, a Slack DM asks each teammate three questions. By 10:15 you have a single threaded recap in #standup, blockers flagged in red.

THE PROBLEM

Daily standups eat the calendar and miss the blockers.

Twenty minutes a day, 5 days a week, 8 people. That is 13 hours of payroll burned every week so three people can say nothing has changed since yesterday. Worse, the one person who actually has a blocker mumbles it in passing and nobody picks it up. An async bot collects updates on each person's own schedule, posts a single summary, and tags the team lead the second the word blocked, stuck, or waiting appears.

13 hrs

PAYROLL BURNED / WEEK ON STANDUP

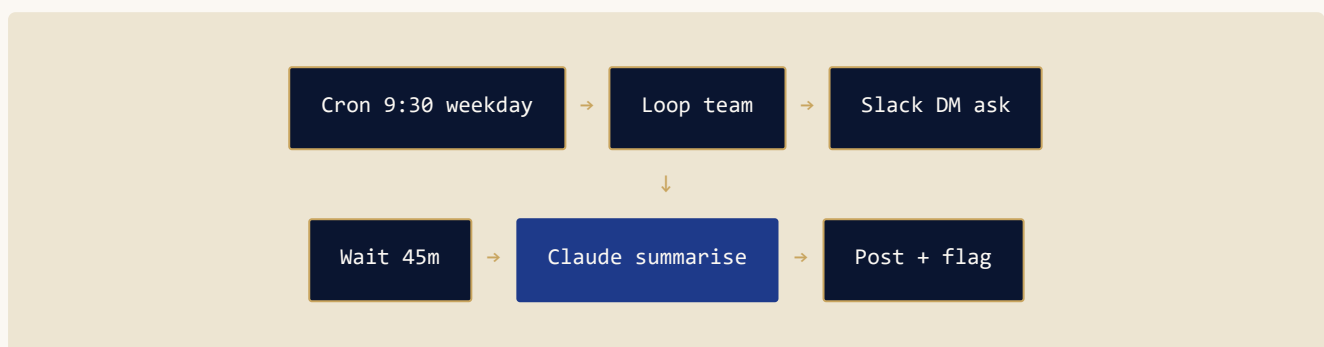

100%

BLOCKERS CAPTURED IN TEXT

Built for

- Remote agencies + studios (4-20 people) on Slack
- Async-first product teams across 3+ timezones
- Founders who replaced standup with a doc and now nobody fills it in

The flow

BUILD IT

Stack & setup

Tech stack

LAYER	TOOL	COST/MO
Orchestration	n8n (self-host / cloud)	\$6-20
Chat surface	Slack bot (free tier OK)	\$0
LLM summary	Claude Sonnet 4.6	\$2-6
Roster store	Google Sheets (team roster tab)	\$0
Total	—	\$8-26

Before you import

- n8n instance (self-host DO \$6/mo OR n8n.cloud)
- Slack workspace + bot token with chat:write, im:write, conversations:history
- Anthropic API key with \$10+ credit
- Google Sheet with tab `roster` (slack_user_id, name, role, active)
- Slack channel #standup for the recap post

Setup (45-75 min fresh, 20 min if n8n is already wired)

1. Spin up n8n: `docker run -d -p 5678:5678 n8nio/n8n` or n8n.cloud
2. Build the Slack app: create bot, install to workspace, copy the bot token
3. n8n credentials: Slack OAuth, Anthropic API, Google Sheets OAuth
4. Workflows -> Import from Clipboard -> paste JSON from page 4
5. Replace REPLACE_ME_ROSTER_SHEET_ID and REPLACE_ME_STANDUP_CHANNEL_ID
6. Edit cron schedule + timezone in the trigger if your team is not on UTC+0
7. Run once manually at any hour to test, confirm DMs land + recap posts, then activate

Skill level: Beginner. Slack app build is the only fiddly bit, plus pasting credentials.

COPY + PASTE

n8n workflow JSON

Copy from GitHub →

One click. Opens raw file with native copy button.
