

HEALTHCARE · CLINIC OPS

# Clinic Missed-Call → WA Recovery

Twilio detects a missed inbound call to the clinic line. Within 60 seconds, the patient gets a WhatsApp with available slots and a booking link. Recovers 38-55% of lost calls.

## THE PROBLEM

# Missed calls = missed appointments.

Front desk picks up 60-75% of calls during open hours. After hours and lunch, the number drops to 20%. Each missed call is a patient who needed something now and got silence. They call the next clinic on Google. A 60-second auto-WhatsApp with two available slots and a one-tap booking link converts roughly half of those back. Costs about \$14 in Twilio per month for a 4-line clinic.

# Stack & setup

## Tech stack

| LAYER          | TOOL                                 | COST/MO         |
|----------------|--------------------------------------|-----------------|
| Orchestration  | n8n                                  | \$6-20          |
| Phone + WA     | Twilio Voice + WhatsApp Business     | \$10-20         |
| Patient lookup | Google Sheets or your PMS API        | \$0             |
| Booking slots  | Cal.com / SimplyBook / NexHealth API | \$0-15          |
| CRM logging    | GoHighLevel or HubSpot               | \$0 if existing |
| <b>Total</b>   | <b>—</b>                             | <b>\$16-55</b>  |

## Before you import

- Twilio number with Voice + WhatsApp Business approved (24-72h)
- An approved WA template message (HIPAA-friendly wording — no diagnosis, no PHI)
- Booking system with a free-slots API (Cal.com easiest — has /v1/availability)
- Google Sheet patients\_db: phone, full\_name, last\_visit\_at, preferred\_clinic OR your PMS API
- n8n instance
- Your clinic's HIPAA-friendly business associate agreement with Twilio (if US)

## Setup (90-120 min plus 24-72h Twilio template approval)

1. Twilio Console → Phone Numbers → your clinic line → Voice configuration → set 'A call comes in' to webhook pointing at n8n
2. Twilio → Messaging → WhatsApp Senders → submit your template for approval (24-72h)
3. Cal.com → Settings → Developer → create API key (or your PMS equivalent)
4. n8n credentials: Twilio basic auth, Cal.com bearer, Google Sheets OAuth (or PMS API)
5. Workflows → Import → paste JSON from page 4
6. Replace REPLACE\_ME\_WA\_TEMPLATE\_SID, REPLACE\_ME\_CALCOM\_EVENT\_ID, REPLACE\_ME\_TWILIO\_FROM
7. **Test with a missed call from your own phone → verify WA arrives with 2 slot suggestions → activate**
